- 6981 CAHAN, Jean Axelrad. National identity and the limits of constructivism in international relations theory: a case study of the Suez Canal. *Nations and Nationalism*, 25 ii (2019) pp. 478-498.
"Constructivism in most of its variants emphasises the creation of circumstances and the social construction of reality. In international relations theory (IR), it also emphasises the establishment of international regimes. The Suez Canal and its governing regime, established at a high point of European nationalism and imperialism in the nineteenth century, are explored as a test case."
